

Hydraulic vacuum filter FRD

Omsat's FRD filter is a vacuum filter with flat endless not waste filtering belt, which stops during the suction time. Filtration is obtained by creating a mud cake.

Hydraulic vacuum centralized filtering station with permanent filter belts.

Applications: filtration of oil or soluble machine-tool coolants, part-washers's baths down to 25 microns.

Flow up to 600 m³/h.

Decantation tank with metal chips skimmer

Non-stop permanent filter media cleaning and drying

Particulate cake de-hydration before unloading
